XSTAMPER PRE-INKED STAMPS

Stock VersaDater

Includes the 8-year Line Dater and one stock Impression Frame from the following three styles. Frame copy prints in blue, date prints in red.

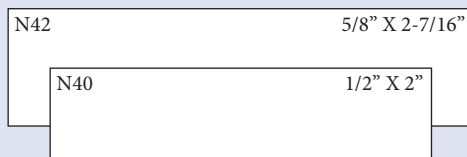

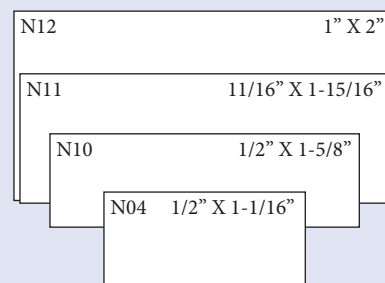

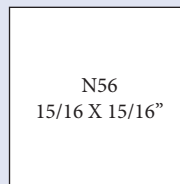

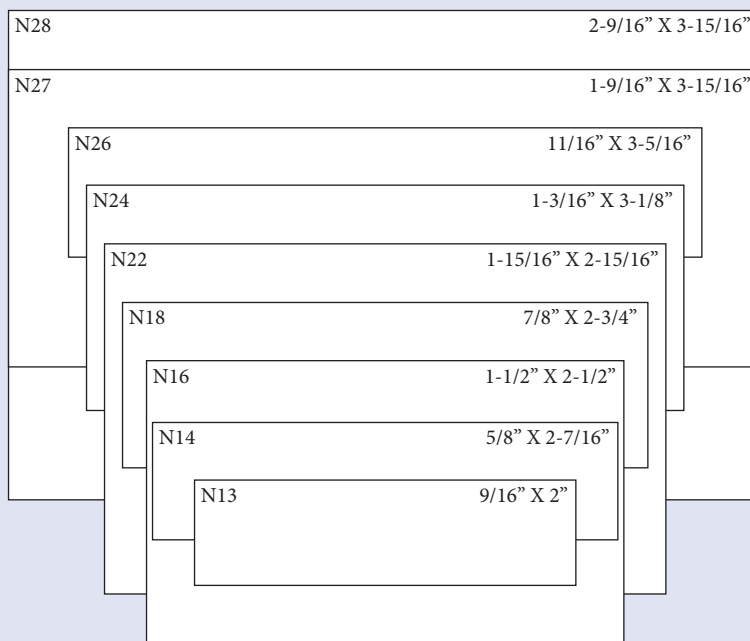

Xstamper Lifetime Guarantee
Our Lifetime guarantee says it all - we stand behind our quality products. Our guarantee covers the entire stamp, not just the mechanical parts. The life of the Xstamper can be 25 years or more. If you are not 100% satisfied with your Xstamper, we'll do whatever it takes to get it right.

XSTAMPER PRE-INKED STAMPS

Xstamper offers a full line of shapes and sizes that are specifically engineered for your custom message. Be creative and use your original artwork or select any of our established impression styles. All stamp impressions are laser engraved to provide a perfect impression time after time.

We guarantee it for life!

This handy pocket stamp is great for carrying around in your pocket, purse or briefcase and will not leak.

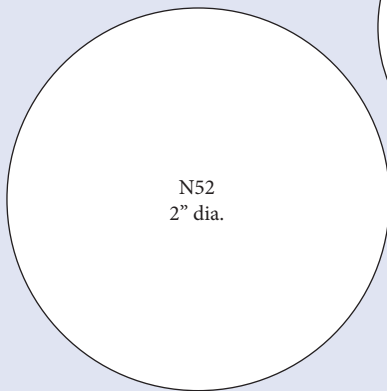

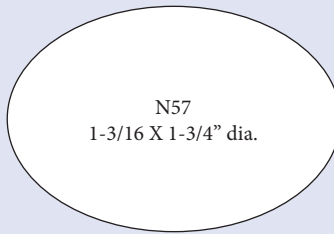

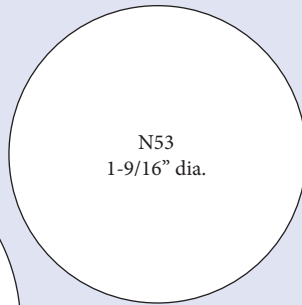

Xstamper Ink Colors:

Red, Blue, Black, Green, Orange & Purple
Special colors available: Light Blue, Light Green, Pink, Yellow or Brown
(Black is used if color is not specified)

Use only Xstamper ink to re-ink your stamp.

Pencil Cap
fits most
pens and pencils

Custom XpeDater

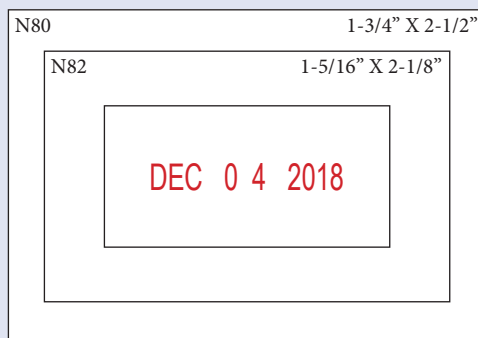

The XpeDater prints your custom message with the month, day and year over a 6-year period. A simple twist of the base and a turn of the dial changes the date, eliminating the need for tweezers.

Custom VersaDater

It's the only date stamp you'll ever need. On its own, VersaDater is an 8-year pre-inked line dater. The date is easily changed with a turn of the dial. Snap on a pre-inked Impression Frame and you create a whole new message stamp - *without the new stamp price.*

Date available in red, blue, or black - frames available in any one of 6 colors.

2000+ SELF-INKING STAMPS

The COSCO 2000+ Self-Inking Stamps are the world's only line of stamps with Microban® anti-microbial protection built into the handle! The quality of these stamps is evident in it's extremely smooth and quiet movement. You can not find self-inkers with more attention to detail.

Please contact Customer Service for more information

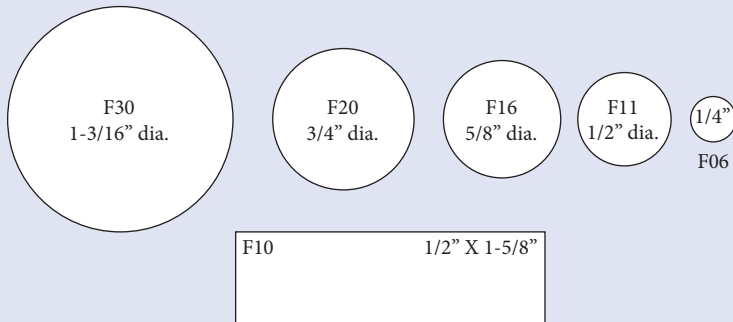

Make your mark almost anywhere with our Industrial Pre-Inked and Traditional stamps. These stamps are ideal for marking any slick or hard to mark surface such as metal, glass, plastic, leather, gloss paper, etc.

Xstamper Industrial Stamps

Xstamper Industrial ink is formulated to be fast drying, permanent and water resistant. The uniquely designed caps are engineered to minimize ink from drying out, extending the functional life of the stamp.

Drying time requires only 90-120 seconds.

Colors Available: Red, Blue, Black Green, Purple, White, & Yellow

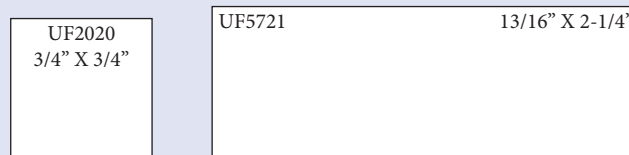

Ultifast Pre-Inked Stamps

The Ultifast marks on almost anything. Ultifast ink is fast drying and water resistant, making it perfect for identifying personal items, photography, industrial equipment and so much more.

Drying time requires only 20-30 seconds.

Colors Available: Red, Blue & Black

Dural Metal Inspectors

Dural metal inspection stamps are produced with red rubber dies. For use with most fast drying inks and solvents.

#1
5/8" dia.

PC1
3/8" dia.

PC2
5/8" dia.

Pencil Caps

Rubber cap fits the end of most standard pencils. Stamps pad is required.

Stick Stamp

The perfect stamp when there isn't room for a regular stamp to make an inspection mark. Custom cut to your specifications. Maximum copy height is 1/4". Stamp pad is required.

RIB-TYPE

Standard **Rib-Type** sets contain an assortment of alphabet and numerical characters using a Gothic Regular font that contains extra pieces of commonly used characters and fewer of rarely used characters.

An A-Font contains the following distribution of characters: 5-A, 4-B, 5-C, 4-D, 6-E, 4-F, 4-G, 4-H, 5-I, 2-J, 5-L, 4-M, 5-N, 5-O, 4-P, 2-Q, 5-R, 5-S, 5-T, 3-U, 3-V, 3-W, 2-X, 3-Y, 2-Z, 3-1, 2-2, 2-3, 2-4, 2-5, 2-6, 2-7, 2-8, 2-9, 3-0, 4-., 4-., 2-', 1-\$, 1-&, 1-¢

Larger character sets contain fewer characters, but in the same proportion.

Numeric type sets (F) meaning figures, contain 5 of each character in sizes 1/16" - 9/16" and 4 each in sizes 3/16" and larger. Special Rib-Type logos or type styles can be furnished upon request.

Office Outfits

Sets contain complete A-Font plus a holder for three lines of type, tweezers (to handle the characters), and an ink pad. Have a couple of these handy sets around for those rubber stamps you need right now! Available in sizes 1/8" - 1/4".

TRADITIONAL HAND STAMPS

Hand Stamps

The traditional hand stamp comes with either a photopolymer or natural rubber die and uses a separate stamp pad to ink it. These stamps are ideal for those times that no other stamp will do.

The photopolymer die is used with any water-based ink. The natural rubber die can be used with alcohol and latex based inks and great for stamping on non-porous surfaces.

INKS

STAMP PADS

Felt stamp pads used for Poly and Rubber stamps. **Colors Available:** Black, Red, Blue, Green, Purple, Dry

Colors Available: Green only

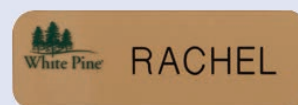

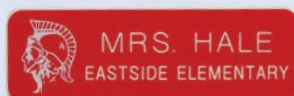

PERSONALIZED NAME BADGES

Engraved Name Badges are available in both the *standard* (front engravable) and the *executive* (reverse engravable) plastic, 1" x 3" and 1-1/2" x 3", however, other sizes are available.

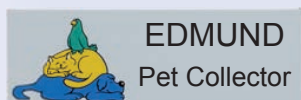

Hot Stamped Name Badges

Hot stamping is a fabrication which fuses a thin plastic foil onto the badge with heat and pressure. This ensures a durable image which resists weathering and abrasion.

Printed Name Badges

Enhance your look and brand awareness with a multi-colored logo or message on your name badge. This badge is cost effective in larger quantities.

With a wide range of **fasteners** such as; the Locking Pin, Bulldog Clip, Clutch, Magnet, Strap Clip or Clear Pocket Adaptor your badge can be securely attached to any article of clothing.

Unless specified the Locking Pin comes standard on all name badges.

Only the highest quality plastic is used for our name badges and signage. With over 40 color choices in stock we can match your business colors and office decor. Other processes and materials are available to serve your particular needs.

DESIGNER/ARCHITECTURAL SIGNS

Our Engraved Designer/Architectural Wall & Desk Signs have been engineered as a quality interior sign system and features a distinctive professional look that matches any modern office environment.

ADA SIGNAGE

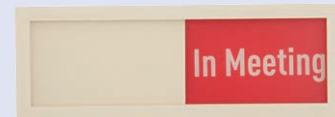

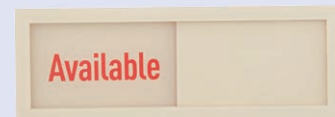

Whether you choose a stock sign or to custom make your own unique design. ADA is a great way to let Architects & Designers create a masterpiece. Contact customer service for a full list of our stock ADA Signage.

GRAPHIC INTERIOR SIGNAGE

Allenite Quality is backed with more than a century filled with end users of our signs, directories and interior graphics that are overly satisfied with our products. Creativity combined with craftsmanship are the hallmarks of Allenite Signs. The standard designs shown here are only the beginning.

DIRECTORY SIGNS

We take pride in manufacturing custom designed directories which will compliment and enhance your interior lobby areas.

Please contact Customer Service for more information

AWARD PLAQUES

Our complete line of awards include solid walnut, oak, veneers and a variety of Plexiglass. With a wide variety of sizes and plate colors available, you can honor your award recipient in style.

CAST BRONZE PLAQUES

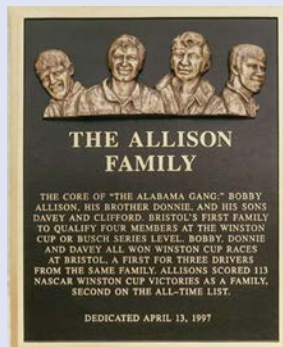

“The Eternal Metal”

Used for over 5000 years, bronze is known as the “metal of the ages” for its beauty and endurance. Cast Bronze and Cast Aluminum plaques are made by pouring molten metal into sand molds. The casting process creates plaques with two (2) levels of graphics - raised and recessed. Often used for dedication plaques, religious and fraternal insignias, service and merit awards and building identification.

STAMPED TAGS

Stamped Tags can be furnished with holes or permanent adhesive and with large easy to read text or numbers that are perfect for numbering church pews, chairs and seats, classroom doors, lockers, fixtures, shelves, baskets, cabinets, bins, drawers, containers; for inventory and identification of machinery and equipment, manufactured articles and sample boards.

ANIMAL LICENSE TAGS

These tags are made of 20 gauge (.032") brass or 16 gauge (.050") aluminum. The aluminum can be anodized gold, green, red, blue or plain (natural) and is available in 13 different shapes. The characters are sunken for maximum durability. Reinforced Holes are also an option for longevity. Type is not standard and can be changed to meet your specifications.

Accessories include: S links packed in bulk or can be attached to tags for an additional cost. ⚠ Split rings available in bulk only.

WARNING: This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm.

SCALES

Where precise measurements are required, reproduction of increments can be held as tight as $\pm .005$ ".

BARCODE / UID PLATES

Bar coding improves the efficiency of asset control with optically readable data. It is available in linear, parallel lines or condensed two dimensional (2D) formats. Bar codes are reproduced photographically on sealed, anodized aluminum ranging in thickness from .003 inches to .060 inches, resulting in one of the most durable plates available. Tolerances on bar code widths can be held to .001 inches.

PROMOTIONAL PLATES

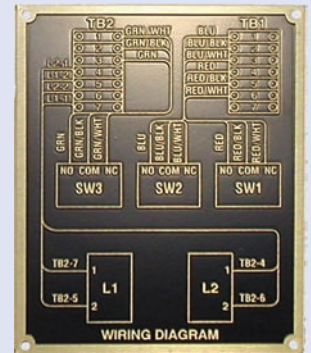

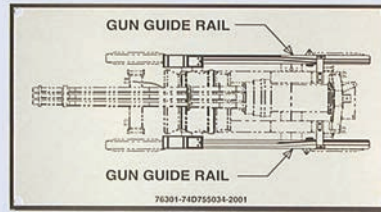

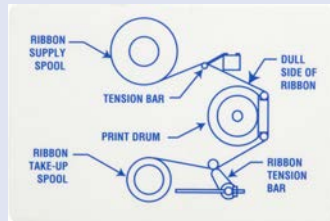

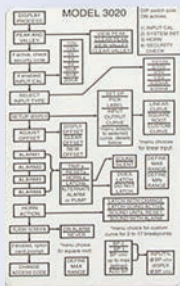

Unique promotional ideas! Metal plates are very distinctive and they gain the attention of prospective customers at a reasonable price.

SCHEMATICS

When technical information needs to be conveyed for service or setup plates. Our Stonewear Process is an excellent choice for schematics and diagrams due to our ability to reproduce fine details clearly.

INVENTORY AND ASSET TAGS

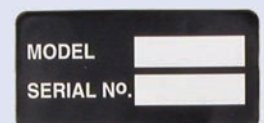

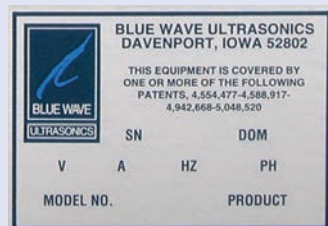

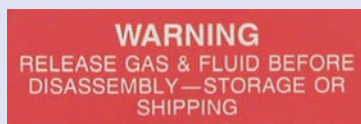

These plates are being used increasingly by companies for permanent marking of all business property, office equipment as well as production equipment.

ALUMINUM FOIL

Our foil stock is .002" dead soft aluminum. This allows the customer to indent variable information onto the label with a conventional typewriter or by hand. (The carbon from most typewriters will not adhere to this material). Most customers prefer the labels left in strips for ease of typing. These labels can be laminated for extra durability.

NOTE: Please specify if you wish to have your labels left in strip form.

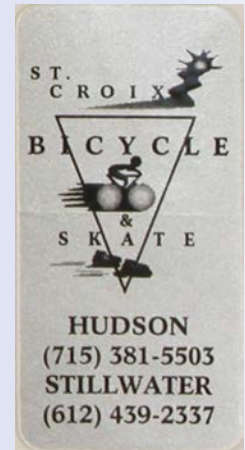

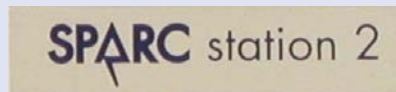

POLYESTER (MYLAR)

Our trade name for these labels is Stonewear Process Mylar Labels. These labels are extremely durable due to the fact that they are laminated with a protective covering. We also can provide these labels with serialized numbers.

DESTRUCTIBLE VINYL

This .002" thick material has the advantage that it can be written on with a pen and it is virtually impossible to remove intact and can be applied to curved surfaces. Uses include: security seals, warranty labels and date code labels.

VINYL

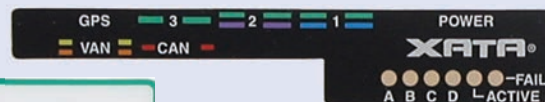

Premium white exterior grade vinyl labels are long lasting and can have improved durability with our over laminate. The flexibility of this material makes it an excellent choice with applying labels to a curved surface. If your application is outdoors, please advise your account representative as there are situations where lamination is not recommended.

LEXAN

Lexan™, also known as polycarbonate has a variety of surface finishes and is subsurface printed giving the benefits of a durable yet decorative part. A label made of this material can be provided with clear windows for L.E.D. readouts. Available in .005", .010" and .020" thick Lexan. One of the benefits of polycarbonate is that it can be die cut into special shapes. Due to the nature of the material, tooling tolerances should not be less than .010" inches.

DIGITAL PRINTING

Digital printing is a relatively new technology which allows us to print multiple colors simultaneously via four color process. Additionally we can bypass the processes of making screens or litho plates. By using a four color process you can significantly improve the appeal of your plates with relatively low set up costs.

ETCHED PLAQUES & SIGNS

Etched plaques and signs have recessed letters which adds both beauty and durability. Etched stainless steel is probably the most durable of all the materials and is available in up to .125" thick. Etched bronze is a cost effective and very attractive alternative to the cast bronze products.

EMBOSSED METAL

Embossing conveys a sense of strength that is not available in any other type of plate. The 3-D look can be furnished in conjunction with one of our printing processes to accentuate your image or without color (blind emboss.) On most embossed plates there is a one time die charge.

DOMED LABELS

Domed labels are a decorative way to enhance your company name or logo. The clear resin of .040 - .060 thick over the label makes the image stand out.

MILITARY STYLE TAGS

Military style tags have become popular as promotional items. We can supply official rolled edge military style (1.120" x 2" x .014" stainless steel) with customized copy, or a similar 1.187" x 2.062" tag which is available in any of our stocked materials and in thicknesses ranging from .016" to .032". The 1.187" x 2.062" size tag can be etched, printed or embossed to fit your special needs.

ETCHED METAL

Etched metal nameplates are one of the most beautiful and durable of all nameplates. The etching process creates a relief of .003 - .005 deep so that even if the paint wears off the image will remain. We can manufacture these plates in all of our stocked metals in thicknesses ranging from .018" to .125". Larger plates can serve the purposes of commemorative plaques or stunning signage. If even more relief is required ask about etched zinc plates.

PHOTOSENSITIVE

These parts are extremely durable, they have been tested for up to 20 years of UV exposure, and can be produced with the finest detail. The extended durability only applies to black images. In addition to these qualities photosensitive plates are an excellent choice for prototypes, short run orders or parts that have to meet military specifications.

FACILITY IDENTIFICATION SIGNS

Your facility is unique, and it requires unique identification solutions. Standardize and personalize facility identification from the front gate of your facility to the back dock. A consistent look and feel creates a visually appealing, welcoming, safe and productive work environment. Personalizing your facility means providing identification solutions that help increase employee buy-in. Do this by using images of employees on signs, promoting your company brand or including safety slogans.

MODEL & SERIAL NUMBER PLATES

These plates provide important information necessary for warranties and limitation of product liability. Serialization and variable data may be stamped on these plates for a nominal cost.

WARNING & INSTRUCTIONAL PLATES

Manufacturers, in an effort to reduce product liability, and to instruct operators in the proper operation of their equipment, will frequently use these labels.

DECORATIVE TRIM PLATES

Our Stonewear Process Metal Plates are printed to your specification and overcoated with a tough baked on finish. These plates are made to the highest nameplate standards as established by "GPI" the nameplate trade association. In addition to our overcoat, all decorative trim nameplates have a removeable premask to protect against scratches. Please specify decorative trim nameplates if you desire these unusually high standards.

METAL MATERIAL STOCK

ALUMINUM

The bulk of the metal nameplates manufactured today are made of 1100 or 3003 alloy aluminum. This material is light-weight and relatively inexpensive.

Actual Thickness

.002" Aluminum – (Stocked with an adhesive back.) This material is very soft and is excellent for use in a typewriter which allows the customer to add any last minute or variable information.

Actual Thickness

.012" Aluminum – This material is very flexible and is generally used as an insert to formed plastic parts.

Actual Thickness

.016" Aluminum – This material is thick enough to supply some structural stability, yet it is easy to work with for forming or embossing operations.

Actual Thickness

.020" Aluminum – The most popular of the aluminum series. This material combines good structural stability with economy.

Actual Thickness

.025" Aluminum – This material is preferable to .020" aluminum when nameplates require both serializing and adhesive backs.

Actual Thickness

.032" Aluminum – This material has considerable structural stability and is desirable for plates that require large amounts of information to be stamped into them, and especially those that require adhesive backs.

Actual Thickness

.050" & .064"

Actual Thickness

Aluminum – It is generally used on very large nameplates such as control panels.

Actual Thickness

.125"

Aluminum – This is our thickest in-stock material. It is generally used on heavy duty cases or as a commemorative plaque.

STAINLESS STEEL

This material is probably the most corrosive resistant metal from which nameplates can be manufactured. All thicknesses stocked in 304 series.

Actual Thickness

.018" Stainless Steel – This material has the same advantages as .020" aluminum.

Actual Thickness

.024" Stainless Steel – Also available in extremely durable 316 series.

Actual Thickness

.030" Stainless Steel – Available in 316 series and 430 series (magnetic). This material is generally called for when the nameplate must withstand great extremes in abrasion and corrosive atmospheres.

Actual Thickness

.050" Stainless Steel – Also available in 316 series.

Actual Thickness

.062" Stainless Steel – This material is generally used for larger signage.

Actual Thickness

.125" Stainless Steel – Appropriate for large outdoor signage & decorative plaques.

BRASS / BRONZE

These are the richest of all nameplate materials. Few metals can match their appearance and durability.

Actual Thickness

.020" Brass – A beautiful material at an economical price.

Actual Thickness

.025" Brass – This material is frequently used for plaques. For that reason we stock a particular type of leaded brass which allows easy engraving for personalization.

Actual Thickness

.032" Brass – Also available in a beautiful **Bronze**.

Actual Thickness

.064" Brass – Also available in .050" thick beautiful Bronze.

Actual Thickness

.125" Brass – Also available in a beautiful Bronze.

AVAILABLE ADHESIVES

Adhesives offer easy application and are very popular. Surfaces must be properly prepared and directions followed or proper bonding will not occur. Generally speaking, surfaces must be clean, smooth and at room temperature.

- 467MP** .002 thick
Adhesive Family No. 200MP

High performance adhesive has excellent peel strength on metal and high surface energy plates. Good long term aging up to 400°F short term heat resistance with medium solvent resistance.
- 468MP** .005 thick
Adhesive Family No. 200MP

Thicker version of 467 for adhesion to textured surfaces.
- 583** .002 thick

Thermo-Bond adhesive. Heat or solvent activated dry film adhesive up to 350° F.
- 7966mws** .009 thick
Adhesive Family No. 200MP

Double coated white adhesive with excellent temperature, chemical and UV resistance. High shear strength. Designed to add opacity to light colored polycarbonate or polyester labels
- 9453** .0035 thick
Adhesive Family No. 300LSE

High Strength modified acrylic adhesive. Designed to bond to low surface energy plastics and powder coated painted surfaces. Up to 300°F short term heat resistance.
- 9445** .005 thick
Adhesive Family No. 350 High Holding

Excellent temperature and solvent resistance, high bond to low surface energy substances. Up to 450°F short term heat resistance.
- 950** .005 thick
Adhesive Family No. 300

High strength acrylic adhesive similar to 9453 only thicker for textured surfaces.
- Foam (black)** .032 thick

Adhesive designed for very rough surfaces. Cross-linked, closed cell polyolefin foam with acrylic adhesive up to 175°F short term heat resistance.

METHODS OF MANUFACTURING

DIGITAL PRINTING

This is an ideal method for vibrant 4 color process graphics and variable data on plastics and some metals. Digital printing eliminates the need for screens and printing plates.

ETCHING

In this process the legend is chemically recessed into the surface of the metal for durability against the most severe environmental conditions.

LASER MARKING

This is a great process to mark variable data and graphics in coated and uncoated metals, plastics, glass and other substrates. The laser beam can vaporize the coatings off of coated metals or anneal marks into natural metals. The laser can also be used to cut special shapes with tight tolerance on many materials reducing the need for tooling.

PHOTOSENSITIZED

In this process, copy is produced by embedding color dies into the pores of the aluminum itself. The material is then sealed, producing a product with greater durability than lithographed or silk screened plates. Photosensitized nameplates are relatively inexpensive in limited quantities, and can be produced quickly.

STONEWEAR PROCESS

Stonewear Process is our trade name for the top of the line in lithographed plates. In this method the copy is printed on, baked at high temperatures, then coated with a clear, tough coating that resists abrasion, sunlight and chemicals. The customer's major advantages in specifying **Stonewear Process** nameplates are excellent reproduction of fine detail, multiple colors, and reasonable cost.

DOMED LABELS

When a decorative touch is needed the "domed" label process heightens your corporate logo and the products image. This unique, flexible process creates a 3-dimensional surface which is virtually indestructible to scratches and dents. It is poured approximately .060" thick on top of your graphics and cured. It is not recommended for extended exposure to sunlight. Standard adhesive is .001" permanent acrylic. Special adhesives are available for hard to adhere to surfaces. Please indicate the type of surface the label will be placed on for a custom quote.

EMBOSSING

The copy on these plates is raised by stamping the material under great pressure between two mated embossing dies. This relief makes embossed plates extremely durable. When combined with **Stonewear Process**, these plates become our most decorative nameplates.

STAMPING

The copy on these plates is recessed by stamping into the metal with steel type. The customer's major advantage is that these tags have virtually equal durability with etched plates without the cost. For this process copy is generally set with existing steel type, but a special steel die can be produced if other typestyles are required.

HOT STAMPING

In this method a hot stamping foil is melted onto the plastic nameplate, so pigment is permanently heat transferred from the foil to the plastic. This process is particularly appropriate for decorative uses and is especially cost effective for small quantities. Please note that because these nameplates are not laminated they are subject to wear and solvent abuse.

SILK SCREENING

These nameplates are produced in much the same manner as in the **Stonewear Process**. The principle advantages of this process include better coverage of large areas of solid color, and retardation of fading because of thicker coverage.

GENERAL INFORMATION

DESIGN SERVICES

WE offer a complete design and art department to help transform your ideas into a clear, detailed nameplate or label. Upon receipt of an order, and at your specification, we will gladly send you a photographic proof of your nameplate or label before actual production begins.

SHAPES AND SIZES

Square or rectangular nameplates or labels can be made in all sizes without requiring any special tooling. However, if you need any unusual shape or require close tolerances, tooling may be required. Over the years we have developed an inventory of many dies for both metal nameplates and labels, so frequently we can supply the tooling you need at no additional charge. In those cases where tooling is required and we do not have the stock die we will need to charge for tooling. This charge, however, will be made on your first order only. Some materials can be fabricated via laser without incurring additional tooling charges.

IMPORTANT FACTORS IN NAMEPLATE PRICING

There are four important factors in nameplate pricing:

- quantity
- size
- number of colors
- mounting methods

(i.e., use of adhesive, or number and size of holes for mechanical mounting).

UNSPECIFIED INFORMATION

There are many minor items that are generally unspecified in purchase orders that we receive. Examples of such items are tolerances, existence of registration marks and surface scratches. In regard to these and other matters, **WE** abide by industry standards as specified by **GPI** (National Association of Graphic and Products Identification Manufacturers, Inc). An abridged copy of these standards will be sent to you free, upon request.

FINISHES

METAL NAMEPLATES

Epoxy finishes are resistant to abrasion and solvents, but are susceptible to fading caused by ultraviolet sunlight.

Acrylic finishes resist solvents and sunlight but are generally not as hard as epoxy surfaces.

Both epoxy and acrylic finishes can be provided in glossy or matte appearance.

LABELS

On all laminated labels the customer has a choice of either a glossy or matte finish.

MOUNTING

METAL NAMEPLATES

Mechanical methods involving applications by screws or rivets are used where permanence takes priority over convenience. Mounting holes of nearly any size can be placed anywhere on the nameplate that your needs require.

LABELS

All labels are supplied with permanent pressure sensitive adhesive backs.

Adhesive descriptions are on page 36 of this catalog.
